

Education for All Care Settings

Patient education that's the better choice for clinicians and their patients. Exactly the right education patients need for any care setting.

Keeps pace with changes in medicine, in patient care, and your requests

Evidence, up-to-date medical guidelines, and patient discharge data. These are what drive the topics in the Healthwise Patient Instructions. You get the specific education your patient needs for any care setting. And you can trust it. Our vigorous review process ensures that patient instructions are updated or added regularly. And when you have a specific request, we listen and respond quickly.

Delivers consistent health information for every care setting

From emergency room to walk-in clinic, take-home care instructions are the same for every setting. With Healthwise Patient Instructions, patients learn what they need to know and how to care for themselves at home. Having patient instructions that are consistent across your enterprise reduces risk and ensures that your patients get the same health education information no matter where they receive care: emergency, inpatient, before or after surgery, primary care, or specialty settings.

Offers meaningful, engaging, and useful education in plain language

People will use and act on health information that means something to them. That's why we put the design, content, length, and tone to the test with clinicians and patients. To make it even easier for patients to understand and recollect information, visually enhanced Patient Instructions include icons throughout to draw patient's attention to the most critical part of the content. Our in-house medical teams and content specialists develop health education that connects with patients on a deeper level. The result is award-winning information that's not only in plain language but also personal and actionable.

Puts the right content into view at the right time. Automatically.

The metadata built into our Patient Instructions includes ICD10, CPT, and SNOMED codes. This indexing works to connect data about demographics, diagnoses, medicines, and procedures to relevant and specific education. Your clinicians can find what they're looking for fast so it becomes an efficient part of their workflow. Getting to the right content quickly is especially important to the emergency department patient discharge process.

Healthwise Patient Instructions categories:

Allergy and Immunology	Nephrology
Anatomy Sketches	Neurology
Cardiovascular	Nutrition and Exercise
