

# Trusted patient education within your workflow

---

Increase care team efficiency and deliver a patient-centered standard of care.

## Cover all patient touch points

Whether it's a patient instruction printed during a clinical visit or a helpful video viewed during a hospital stay, all your patient education is connected and consistent when you partner with Healthwise. Extend the reach of your care with the ability to seamlessly deliver patient education at discharge.

## Make it meaningful and specific

Healthwise content is easily integrated into your EMR or PHR. Because of that integration, the most relevant, patient-specific content is automatically suggested within the clinical workflow. All education delivered to patients is recorded, and patient activity and responses are tracked. This improves workflow efficiency and allows the entire care team to know how engaged their patients are, which helps guide the next step in the care plan.

## Satisfy patients

Have confidence in your patient education knowing it's written in plain language so it makes sense to patients and helps them make positive health behavior changes. We continually test and evaluate our content and technology to ensure you'll achieve the highest degree of patient satisfaction by giving them the information they want.

## Implement and maintain with ease

Healthwise for Point of Care is built for efficient, standards-based integration into your systems. Our experienced technical team will work with your EMR company to deliver based on your requirements. The solution includes a CCHIT-certified, pre-built interface that allows clinicians to select, personalize, and deliver patient education within your EMR.

## Meet accreditation requirements

You can rely on this comprehensive solution to help you achieve accreditations because it supports the latest requirements and clinically-accepted guidelines, including Joint Commission Requirements for discharge instructions, Physician Clinical Quality Measures for reporting, and NCQA for Patient-Centered Medical Home.

# Efficiently improve care quality and outcomes with patient-specific education

## Healthwise for Point of Care

**The Point of Care Solution is everything you need to deliver health education within the clinical workflow for better outcomes and greater patient satisfaction. Your clinicians will have access to:**

- Over 3,500 Patient Instructions in English and Spanish, plus the most commonly used instructions in 17 additional languages.
- Trusted, reliable, and up-to-date drug leaflets from Multum, covering more than 3,000 over-the-counter and prescription medicines.
- More than 600 engaging, bite-sized videos that make it simple for patients to take in—and then take on what’s next in their health care.
- Shared decision making tools to help patients better understand their choices and make a decision that is right for them with the help of their provider.
- Go-to-Web codes directing patients to more information online.
- The ability to print tailored health education at the point of care or send it electronically to patients via a secure message center.

## Healthwise® Knowledgebase

**With health content for your PHR and website, you’ll help patients make sense of the health data found in their medical records and attract consumers to your service lines. The Knowledgebase enables you to:**

- Provide more than 8,000 straightforward and helpful health articles.
- Clearly present action-oriented information that teaches people how to be healthier.
- Offer hundreds of patient decision aids and self-management tools, promoting ongoing healthy behavior.

## Healthwise® Custom Content Manager

**Enhance your patient education strategy with custom content. Custom Content Manager makes it easy to:**

- Develop new content with your branding and style, including support for images and tables.
- Upload your in-house materials into a centralized system.
- Make content easy to find by controlling where it shows up in search results.
- Deliver your documents alongside Healthwise education to patients wherever they are, on any device.
